

J&D Manufacturing

JDAV010M

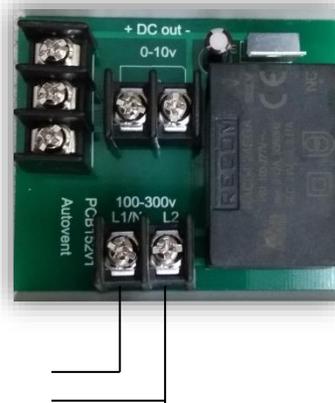

The JDAV010M is a 100-240v powered manual speed control for 0-10v speed control circuits.

AC power.

Supply 100-240vac to the L1& L2 terminals .

Ground is not required.

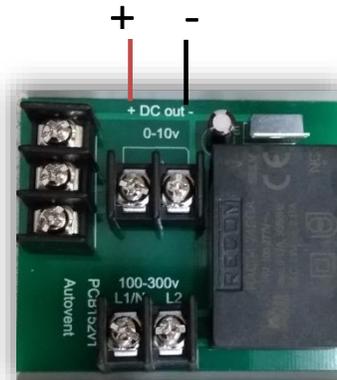

0-10v signal out

The DC out terminal is the 0-10v output . Polarity is very important.

+ is usually marked analog + on variable speed controls

- Is usually marked analog common

10-0 or 0-10v signal style

Most speed controls want 10v as full speed. Some want 0v as full speed.

Swap the black & red wires to make the control 0v as full speed.
